

Ep 10 - Jo dikhta hai, Vo bikta hai

- Making App beautiful by applying styles , css to it

### → Sass & Scss

- Advanced and easy way of writing css.
- Not recommended way to write css.

### → Styled Components

- Industry practice , preferred way to write css.

[styled-components.com]

### → Libraries or frameworks for css

e.g material UI (popular)

bootstrap

Tailwind CSS

Chakra UI

Ant Design.

### → Tailwind CSS

- Trending CSS framework.

- Configure Tailwind into project

npm i tailwindcss postcss

npx tailwindcss init

• tailwindcss

normal tailwind css  
package

• postcss

convert modern css into  
something most browsers  
can understand

Behind the scenes, tailwind css uses postcss  
tool.

• npx tailwindcss init

↳ Initializing tailwind in project

↳ Creates tailwind.config.js file.

• Configure postcss in project

↳ create '.postcssrc' file in root folder

↳ paste:

{  
  "plugins": {

    "tailwindcss": {}  
  }

}

↳ If we have use tailwind in project,  
parcel needs postcss to read tailwind.

↳ parcel use postcss to understand  
tailwind.

→ modification in tailwind.config.js

- content : ["./src/\*/\*.{html,js,ts,jsx,tsx}"]

Takes list of all files where I can use tailwind CSS.

→ index.css

Importing tailwind into index.css file with,

- @tailwind base;
- @tailwind components;
- @tailwind utilities;

→ Writing tailwind in project

tailwind gives us prebuilt classes

- classes

- 1] flex
- 2] justify-between
- 3] w-28
- 4] p-4 , m-4

- tailwind vs code extension

i.e tailwind CSS Intellisense

5] shadow-lg

6] ml, mr, mt, mb / pr, pl, pt, pb.

f] px, mx, → left & right  
s] py, my → top & bottom
